

## **Silkpeel Dermalinfusion**

### **Pre and Post Treatment Instructions**

#### **Pre treatment instructions:**

1. Avoid any known skin irritants 1 week prior to treatment.
2. Please inform our office if you are pregnant or nursing.
3. Avoid direct sun exposure without sun block protection for at least 3 days before treatment.

#### **Post treatment instructions:**

1. Following your treatment, you can immediately return to your normal activities.
2. Your skin will have a warm, pinkish glow that will usually fade in about 30 minutes, leaving your skin looking healthy and renewed. The moisture of the topical solution used during the Dermalinfusion will leave your skin feeling cool and refreshed.
3. For the first 72 hours post treatment, your skin is more vulnerable to irritation and damage.
4. You may find that you are sensitive to products that you usually use and tolerate well. If your skin feels more sensitive than usual, cleanse with a gentle, non-acidic cleanser.
5. Makeup may be applied as long as the skin is not broken. If the skin is broken, apply antibiotic ointment and contact our office.
6. You should always wear an SPF of 15 or greater when exposed to any sunlight.
7. While you may see visible results after the first treatment, lasting and more significant results will be seen after 4-6 treatments spaced 7-10 days apart, supplemented by a recommended skin care regimen.
